

Adam L.

ELECTRICAL ENGINEER

Corporate and Capital Planning

1. How did you get started at Maritime Electric?

I started working with Maritime Electric in an engineering co-op position in the summer of 2017. During my first co-op I worked with the Operations team. My next two co-ops were with the Engineering team. I started full time with the Engineering team in the summer of 2019, and moved to the Corporate and Capital Planning Department in early 2023. Working with a company that encourages me to regularly change my role has been very beneficial to my growth, both technically and professionally. I was granted my Professional Engineer designation in mid-2022.

2. What has been one of the highlights of your engineering career to date at Maritime Electric?

I have had the opportunity to help with the integration of renewable resources on Prince Edward Island. This has included both technical studies, discussions with stakeholders and the development of guidelines to help streamline renewable growth on the Island.

3. What would you tell an aspiring engineer or student about working in the utility industry?

The utility industry is undergoing a dramatic change as many aspects of our life are electrified. As an engineer working in this industry, I have had the opportunity to integrate new solutions to manage this electrical growth.

4. Are there opportunities for regular professional development?

The Company provides regular training opportunities. The Company also provides the opportunity to explore additional training and encourages me to seek out courses and opportunities that interest me.

All our energy.
All the time.
