

Adam M.

PLANNING ENGINEER
Corporate and Capital Planning

1. What is your role and how long have you worked at Maritime Electric?

I work as a planning engineer in our Corporate and Capital Planning Department. We compile the capital budgets, plan for the future of our system and make decisions on larger policy questions. I've been working at Maritime Electric since 2013.

2. How did you get started at Maritime Electric?

I started as a consultant working two days a week at the Charlottetown Thermal Generating Station (the Plant) and was offered a full time position in the Spring of 2014. I continued working at the the Plant, added Fleet Supervisor to my duties and began working for our upcoming cable project. As the project ramped up, I transitioned to supervising the marine operations for about two years. Shortly after that project ended, I moved to the Corporate Planning Department.

3. What has been one of the highlights of your engineering career to date at Maritime Electric?

One of my highlights was working on the cable project. It was my first time working in the marine environment and working with such large equipment. I was also right in the middle of project planning and large contract negotiations. It was very busy, stressful and a lot of fun!

4. What would a normal day look like for you in your current role?

There are no normal days, each day is different!

All our energy.
All the time.
